

## My Day in Functions

### Discussion

Functions can be used to perform sets of commands. They separate a big task into smaller, reusable portions which can make our programs shorter, more readable, and reusable.

### Class Activity

Think about your typical school day. What are the functions that you routinely perform that can be defined like a function? In the box below, write out what your day looks like by defining at least 4 functions and calling them throughout your day.

### Example

```
function main(){
  snapChat();
  takeNotes();
}

function snapChat(){
  openApp();
  takePhoto();
  send();
}

function takeNotes(){
  takeOutPaper();
  writeVocabWords();
}

main();
```
